

Silage clamp covers

Protective covers for grass and maize silage clamps

We supply Genafil protective sheets to protect silage clamp foil used or covering valuable silage. Genafil is a strong, fine-mesh, open woven fabric which has been tested under the most extreme weather conditions. The material has high UV resistance and its expected lifespan under normal use is a minimum of 10 years. The covers are available in standard lengths of 10 and 15 m x 8/9/10 and 12 metres wide in green.

Accessories

Ballast bags are used for securing the silage clamp cover. These green bags are made from PE-monofil and woven fabric. The ballast bags are 120 cm long, approx. 14 cm in diameter and are fitted with a handle.

Trevira securing band is used in conjunction with the ballast bags to securing the silage clamp cover.
